NZRA Event Report 2019

Douglas Woods

New Zealand

There were 37 Rogaines (36 in 2018) in New Zealand with results recorded on the NZRA web site. These range from 1 hr after work events though to 24 hr weekend events, and include cycling, snow, water and land variations.

The 2019 NZ 24hr event run by Terry Davis of Highland Events was well supported with 71 teams and over 150 competitors. The event was held in perfect conditions in a classic central otago location. Many thanks to Matt Bixley who stepped up to help after the death of the long-time rogaine organiser Ed Stevens. The 2020 NZ 24hr is proposed to be run in the Hanmer Region at the end of November 2020.

The Heights of Winter was again an extremely popular and oversubscribed event. This has become the marquee rogaine event in New Zealand. The 2020 event will be run by PAPO and will need to conform to the COVID-19 event rules.

World

The WRC were held in LA Molina, Spain and many Kiwis made the journey to the event. On a challenging course Tim Farrant and Tane Cambridge were 2nd in the Men's Open. This was a very professionally run event and highly regarding be all competitors.

New Zealand should be able to bid for the 2024 WRC. There have been some preliminary discussions on making a bid. This will need to start getting serious over the summer of 2020.

Navlight

The Navlight continues to be the best electronic system for rogaines. At the start of 2020 we had two full sets of fully functional Navlight punches. Pete is also in the process of constructing 1000 new punches, which should ensure that the Navlight system can continue to be used for many years to come.

The uploading of the results to Grieg Hamilton's rogaine-results website has been greatly appreciated by competitors. Greig is continuing to upgrade the site

Gear

NZRA has a small amount to gear that can be used by any rogaine. This includes 4 RT radios, A sound System and 2 PLBs.

The control flags are starting to get a bit tatty. There is a need to start a replacement program. The main issue is getting some robust flags as the standard orienteering flags and not strong enough to be left out on the course for 2 or 3 weeks.

There is a small 3.7m square canvas tent that has not been used in the last 10 years. Unless anyone wants it, I will dispose of it.
